Mobile QA & Device Protocol | Agile | Low-latency Gen AI

Data-driven Software QA Engineer with 7+ years of experience in manual and automated testing for web, mobile and embedded system applications, including low-latency Generative AI. Expertise in identifying and resolving defects early in the development cycle to ensure delivery of High-quality products. Proficient in testing Android/iOS and Web Applications, with experience in functional, smoke, regression and validating performance across device platforms.

SKILLS

Testing Tools and Methodologies: Selenium, JUnit, TestNG, Postman, SOAP UI, JMeter, BrowserStack, Appium, Wireshark, QCAT, LoadRunner, TestRail, ChatGPT.

Defect Management and Collaboration Tools: Jira, Bugzilla, PLM, ALM, Confluence, Slack, GitHub, GitLab, Azure DevOps, Trello, Notion.

Programming, Frameworks, and Environments: SQL, MongoDB, DB2, REST Assured, Python, JMeter, Cucumber, TestNG, Jenkins, Visual Studio Code, Eclipse.

EXPERIENCE

Co-Founder

02/2025 – 05/2026

Profectra

- Co-founded Profectra, an agentic automation studio delivering bespoke multi-agent automation workflows tailored to client operations and business needs.
- Worked directly with clients to identify workflow bottlenecks and translate business requirements into practical AI-native products and automation strategies.
- Developed MCP-based integrations that enabled AI agents to access client systems, share real-time context, and execute across connected environments.
- Designed client applications and interface experiences that translated business requirements into intuitive, modern, and agent-ready digital products.
- Drove end-to-end delivery across product design, frontend experience, testing, and launch readiness, applying a strong QA and performance mindset to ship trustworthy agent-first experiences.

Senior Software Quality Analyst

02/2020 – 01/2025

Samsung Electronics America

- Led testing of AI-powered object recognition and voice assistant features for Samsung devices, boosting accuracy and optimizing user experience across the Galaxy ecosystem.
- Conducted performance and KPI testing, analyzing app responsiveness, frame rates, memory usage and overall system stability, accelerating issue resolution by 15%.
- Directed cross-departmental collaboration to integrate software releases, train teams, and ensure smooth adoption, achieving 100% alignment across three value streams.
- Mentored and managed five QA engineers, fostering a high-performing team environment that increased productivity by 20% through process optimization.
- Tested and validated real-time AI features, ensuring low-latency inference and 99.9% uptime for live translation and voice assistant applications.

Software Quality Analyst

05/2019 - 02/2020

Samsung Electronics America

- Developed and implemented test plans for manual and automated testing of network protocols, ensuring adherence to product quality standards and industry benchmarks.
- Executed comprehensive performance testing with JMeter, analyzing scalability and improving response times by 25% during peak network loads.
- Automated regression testing with Selenium and Appium, boosting efficiency and increasing overall test coverage.
- Partnered with cross-functional teams to troubleshoot embedded software issues and validate hardware components, optimizing testing workflows and reducing downtime.

Quality Analyst

11/2018 - 04/2019

Apteeq Pharma

- Created and updated technical documentation, test workflows, and processes, streamlining QA operations and improving team efficiency by 20%.
- Directed smoke, functional, and regression testing across QA, SIT, UAT, and PROD environments, ensuring compliance with healthcare IT standards.
- Partnered with R&D and clinical teams to implement IT standards and regulatory requirements, ensuring adherence to medical technology guidelines.
- Collaborated with stakeholders to define and design performance test requirements, increasing test coverage and enhancing system reliability for healthcare applications.

Quality Analyst

06/2018 - 11/2018

Bridge Marketing

- Designed and executed test cases for functional, ad-hoc, and exploratory testing, increasing test coverage and ensuring user-friendly marketing platforms.
- Validated email marketing functionality across Android and iOS devices, ensuring compatibility and improving user engagement.
- Executed RESTful API testing using SOAPUI and Postman, identifying and resolving critical integration issues to enhance system reliability.

Data Analyst

01/2018 - 04/2018

Meritek, Inc

- Validated database integrity through SQL-driven back-end testing, ensuring accuracy and consistency across web-based applications.
- Conducted API testing with SOAP UI for Java-based portals, resolving critical middleware issues and enhancing application performance.
- Collaborated with development teams to resolve cross-browser compatibility issues, enhancing user experience and platform reliability.

EDUCATION

Master of Science M.S. - Information Technology

2016 - 2017

Southern New Hampshire University

Bachelor of Computer Engineering – Information Technology

2012 - 2015

International University of Rabat
