Senior QA Engineer | Software, Mobile & AI Feature Testing | Playwright, Python, CI/CD

Senior QA Engineer with 8+ years of experience delivering manual, automated, mobile, embedded, and AI-feature quality assurance for enterprise-scale products. Expertise spans Android/iOS device testing, firmware and carrier validation, API and performance testing, plus automation using Playwright, Selenium, Appium, Python/pytest, and CI/CD. Led validation across 100+ physical devices and 30+ Galaxy models while mentoring QA engineers and accelerating defect resolution in high-release-cadence environments.

SKILLS

Testing Methodologies: Functional, Regression, Smoke, Exploratory, API testing, Performance & KPI testing, AI feature testing and output validation, CI/CD test integration, Test planning, Agile/Scrum.

Automation: Playwright, Selenium, Appium, Python, pytest, Jenkins, GitHub Actions, Git, Docker.

API & Performance: Postman, SoapUI, REST API, JMeter, k6, SQL, MongoDB.

Mobile & Device: ADB, Android Studio, Xcode, BrowserStack, Charles Proxy, Wireshark, QCAT.

Test Management: Jira, Xray, TestRail, Confluence, Bugzilla, ALM / PLM, Azure DevOps.

EXPERIENCE

Co-Founder | Quality Assurance & AI Agent Testing

02/2025 – 06/2026

Profectra (profectra.com)

- Co-founded Profectra, an agentic automation studio building multi-agent systems end to end, including architecture, implementation, QA, and deployment.
- Shipped several production web and AI-agent applications, owning test strategy, automated regression coverage, release validation, and deployment.
- Translated product requirements into practical test plans and release criteria, helping prioritize risks and keep delivery aligned with user needs.
- Developed cross-browser regression coverage in TypeScript using Playwright, containerized with Docker and integrated into GitHub Actions CI/CD.
- Built automated quality checks in Python and pytest for AI outputs and REST APIs, detecting silent failures and validating critical behavior on every commit.
- Configured and validated MCP-based integrations connecting AI agents to external tools under a read-only permission model, following source-level dependency audits.

Senior Software Quality Analyst

02/2020 – 01/2025

Samsung Electronics America

- Ran extensive manual functional, regression, performance, network, and OTA update testing on phones, tablets, and wearables for every major firmware release.
- Filed, triaged, and tracked 20+ defects per week in Jira and PLM across near-daily firmware builds, using ADB and Android Studio logcat to identify root causes and working with teams to prioritize fixes, report release status, and accelerate resolution by 15%.
- Updated and maintained existing Appium test suites, adding coverage for new features and running them through Jenkins CI.
- Led testing of AI object recognition, live translation, and voice assistants across 30+ Galaxy models, evaluating Arabic, French, and English accuracy, RTL rendering, latency, and reliability.
- Mentored and managed five QA engineers and directed cross-departmental release integration across three value streams, increasing productivity by 20%.

Software Quality Analyst

05/2019 – 02/2020

Samsung Electronics America

- Developed and implemented test plans for manual and automated testing of network protocols, ensuring adherence to product quality standards and industry benchmarks.
- Ran performance testing on devices, measuring app launch time, memory use, and network throughput with ADB, Android Studio Profiler, and QCAT, improving response times by 25%.
- Automated regression testing with Selenium and Appium, integrated into Jenkins CI pipelines, boosting efficiency and increasing overall test coverage.
- Partnered with cross-functional teams to troubleshoot software issues using ADB and Android Studio logcat analysis, and validate hardware components, optimizing testing workflows and reducing downtime.

Quality Analyst

11/2018 – 04/2019

Aptek Pharma

- Created and updated technical documentation, test workflows, and processes, streamlining QA operations and improving team efficiency.
- Performed smoke, functional, and regression testing across QA, SIT, UAT, and PROD environments, ensuring compliance with healthcare IT standards.
- Partnered with R&D and clinical teams to implement IT standards and regulatory requirements, ensuring adherence to medical technology guidelines.

Quality Analyst

06/2018 – 11/2018

Bridge Marketing

- Designed and executed functional, exploratory, and regression test cases for web marketing platforms, automating repeat checks with Selenium to increase coverage.
- Validated email marketing functionality across Android and iOS devices using ADB and Xcode simulators, ensuring compatibility and improving user engagement.
- Executed RESTful API testing using SoapUI and Postman, identifying and resolving critical integration issues to enhance system reliability.

Analyst

01/2018 – 04/2018

Meritek, Inc

- Validated database integrity through SQL-driven back-end testing across multiple web-based applications, ensuring data accuracy and consistency between the front end and the underlying tables.
- Conducted API testing with SoapUI against Java-based portals, identifying and resolving critical middleware integration issues that were degrading application performance and response times.
- Collaborated with development teams to reproduce and resolve cross-browser compatibility issues affecting end users, improving overall user experience and platform reliability across supported browsers.

EDUCATION

Master of Science – Information Technology

2016 – 2017

Southern New Hampshire University

Bachelor of Computer Engineering – Information Technology

2012 – 2015

International University of Rabat

LANGUAGES

Arabic: Native | **French:** Native | **English:** Professional working proficiency

Experienced in multilingual and right-to-left (RTL) mobile testing.
